

web_scraping_project

```
In [ ]: from bs4 import BeautifulSoup
import requests
import pandas as pd
```

```
In [4]: url = ("https://en.wikipedia.org/wiki/List_of_hospitals_in_India")
```

```
In [5]: headers = {
    "User-Agent": "HospitalScraper/1.0 (contact: your_email@example.com)"
}
```

requesting to fetch data

```
In [6]: page = requests.get(url , headers = headers )
```

```
In [7]: print(page)
```

<Response [200]>

```
In [10]: soup = BeautifulSoup(page.text , 'html.parser')
```

```
In [81]: print(soup)
```

fetching columns

```
In [53]: Hospital_col = soup.find('tr')
print(Hospital_col)
```

```
<tr id="mwASE"><th id="mwASI">Name</th>
<th id="mwASM">Type</th>
<th id="mwASQ">Managed by</th>
<th id="mwASU">Location</th></tr>
```

```
In [54]: hos = [col.get_text(strip=True) for col in Hospital_col if col.get_text(strip=True)]
```

```
In [58]: hos
```

```
Out[58]: ['Name', 'Type', 'Managed by', 'Location']
```

```
In [50]: hos = [cols.text.strip() for cols in Hosiptal_col]
hos
```

```
Out[50]: ['Name', '', 'Type', '', 'Managed by', '', 'Location']
```

```
In [60]: hos = [col.get_text(strip=True) for col in Hospital_col if col.get_text(strip=True)]
          hos
```

```
Out[60]: ['Name', 'Type', 'Managed by', 'Location']
```

Here i have converted html into columns through pandas .

```
In [61]: df = pd.DataFrame(columns = hos)
          df
```

```
Out[61]:
```

Name	Type	Managed by	Location
------	------	------------	----------

Now , going to fetch the content present in table.

```
In [83]: table = soup.find_all('tr')
          print(table)
```

```
In [70]: for row in table[1:][:14]:
          row_data = row.find_all('td')
          individual_row_data = [content.text.strip() for content in row_data]
          #print(individual_row_data)
          length = len(df)
          df.loc[length] = individual_row_data
```

```
In [69]: print(len(df.columns))
          print(len(individual_row_data))
          print(individual_row_data)
```

4

4

```
["Dr. Rupali's Abortion Hospital", 'Private', 'Dr. Rupali Mishra', 'Pul Pehladpur']
[3]']
```

```
In [71]: df
```

Out[71]:

	Name	Type	Managed by	Location
0	Charak Palika Hospital	Public	New Delhi Municipal Council	Moti Bagh
1	Dharamshila Narayana Superspeciality Hospital	Private	Narayana Health	Vasundhara Enclave
2	Dr. Ram Manohar Lohia Hospital	Public	Government of India	Connaught Place
3	Guru Teg Bahadur Hospital	Public	Government of NCT of Delhi	Dilshad Garden
4	Indraprastha Apollo Hospital	Private	Apollo Hospitals	Jasola Vihar
...	...	...	...	...
79	Safdarjung Hospital	Public	Government of India	Ansari Nagar West
80	Sanjeevan Hospital	Private		Daryaganj
81	Sir Ganga Ram Hospital	Private		Rajinder Nagar
82	St. Stephen's Hospital	Private		Tis Hazari
83	Dr. Rupali's Abortion Hospital	Private	Dr. Rupali Mishra	Pul Pehladpur [3]

84 rows × 4 columns

converting into csv file

In [86]: df.to_csv(r"C:\Users\user\Desktop\DA\python for DA\Web_scraping_projects\Hospital_1
